Product

Protective hood

Designation

SR 345

Ordering No.

H09-1012

Product description

The SR 345 protective hood is designed for use together with the SR 90-2 half mask, the SR 100 half mask and the SR 200 full face mask with filters or SR 307 compressed air attachment, and with the SR 90 Airline. The hood provides protection against splashing and dripping of most substances, both liquid and solid.

The hood is made of chemicals-resistant materials and can be used in any situation in which the half mask can be employed. The hood is suitable as protection against most acids and solvents in relatively low concentrations. However, the material may be affected by extended contact with certain solvents in liquid form.

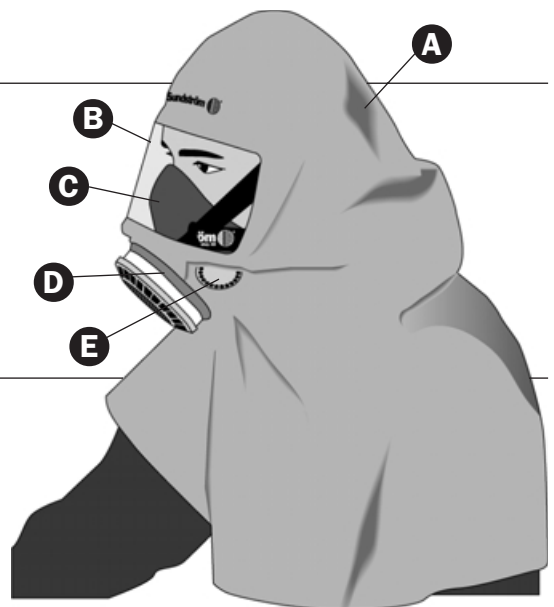

The hood is extra roomy, so that both a safety helmet and ear protectors can be worn under the hood, if necessary. The hood extends over the user's shoulders, back and chest.

The polycarbonate visor is treated to prevent misting. The hood can be machine-washed about 10 times - without spin-drying - at a maximum of 40°C.
